DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file. A translation of the priority document has been received.

Allowable Subject Matter

2. Claims 1-12 and 14-22 are allowed.
3. The following is an examiner's statement of reasons for allowance: Conventional soldering methods typically employ Pb plating or Pb free plating but does not typically teach Pb plating with Pb free solder deposition. The closest prior art is applicant's copending application 10/079432 which is not yet in condition for allowance. Usually one type of solder is used as an alternative for the other. See Miura (US 2003/0030149 A1). Conventional flow soldering devices comprise multiple heaters above the solder supply and downstream of the solder supply. However these heaters are typically on the same side of the substrate as the solder supply. See O'Rourke (USPN 4402448). When heaters are on the opposite side of the substrate they are not right above the solder supply in the flow solder station or section. See Comerford (USPN 4600137) and Elliott (USPN 5232562).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
